

REDUCE THE COST OF MAINTENANCE BY REDUCING THE NEED FOR MAINTENANCE

54%

Lubrication-related failures account for 54% of all bearing failures.

Source: SKF USA Inc., also TAPPI 1995 Engineering Conference Proceedings

Failed bearings result in costly equipment maintenance and downtime. Most bearings fail because of improper lubrication.

Any serious effort to permanently reduce the cost of maintenance must include upgrading the quality of the lubrication.

THE ROYAL PURPLE ADVANTAGE

TECHNICAL BENEFITS

INTRODUCTION

The industrial and racing markets associate outstanding quality and superior performance with Royal Purple. This reputation has been earned through Royal Purple's relentless pursuit of excellence in lubrication.

Royal Purple formulates the most advanced lubricants available on the market today. If you currently use Royal Purple's products, you already know this. If you do not, they offer the opportunity to greatly improve the reliability and efficiency of your equipment and to lower your operating costs.

SUPERIOR PRODUCTS, SUPERIOR PERFORMANCE

Lubricants are typically viewed as a commodity, where low price and service issues dominate purchase decisions. Therefore, oil companies seeking large market share have a great incentive to keep manufacturing costs low and little incentive to upgrade lubricant quality.

Royal Purple recognizes that lubricants are not a commodity. Reliable operation of rotating equipment critically depends upon the quality of the lubricant used. Lubricant performance directly and significantly affects how long, how reliable, how efficient and at what cost (i.e. parts, labor, downtime, number of oil changes and energy costs) your equipment will operate. Therefore, Royal Purple will always provide you with the highest quality lubricants available anywhere.

SYNERLEC[®] ADDITIVE TECHNOLOGY — BEYOND SYNTHETIC[™]

Synerlec additive technology is Royal Purple's most versatile additive technology and the cornerstone of its product line. Royal Purple's oils for turbines, pumps, compressors, blowers, hydraulics, gears, refrigeration systems, motor oils, and more contain Synerlec additive technology. It forms a tough, ionic, slippery, chemical film on all metal surfaces.

"Since our initial oil fill in November 1991 we have never had to change or drain your lubricating oil . . . which we monitor with an oil analysis program. Furthermore, we have not experienced a single bearing failure since plant start-up over 35,000 hours ago." -Gas Plant Supervisor

"Our plant has more than 100 spindle bearings that exceed 7,200 rpm. Prior to using Royal Purple, the average bearing life was approximately four months. Since changing to the RP grease, there has been one bearing failure in over two years, and it was not lubrication related."

> -Plant Maintenance Superintendent, Roofing Materials Manufacturer

I. Synerlec Provides a Thicker Oil Film

By forming a chemical film on metal surfaces, Synerlec additive technology adds to the oil film thickness created by the oil viscosity alone. An increase in oil film thickness is proven to increase bearing life in direct proportion to the percentage increased. (See page 34 in technical appendix.)

II. Synerlec Creates a Tougher Oil Film

The tough oil film on metal surfaces makes a breach of the oil film much more difficult and unlikely. By preventing metal-to-metal contact, Synerlec additive technology enables equipment to operate normally under severe operating conditions where it would otherwise quickly fail. Synerlec additive technology's ability to carry considerably greater loads than other mineral and synthetic oils provides extra protection for bearings subjected to mechanical stresses caused by misalignment, shaft flex, elevated temperatures, imbalance or water contamination, which thin the oil.

III. Synerlec Micro-mend Contacting Metal Surfaces

When opposing asperities (microscopic projections on metal surfaces) breach the oil film of competitors' oils, surface initiated fatigue occurs, which causes bearing surfaces to quickly wear and become rougher. Vibrations steadily increase because these rough surfaces can no longer be fully separated by the thin film of the oil, causing increased metal-to-metal contact to occur. Synerlec additive technology's tough film strength not only makes it more difficult for asperities to breach the oil film, but it actually smooths bearing surfaces that have already been damaged. Instead of becoming rougher, Royal Purple's Synerlec additive technology gently micro-mends these asperities, creating smoother surfaces, which then are easily separated by Royal Purple's tough oil film. Damaged bearings experiencing high vibrations can run normally for greatly extended periods of time simply by changing to Royal Purple's oils with Synerlec additive technology. (See pages 34-35 in technical appendix.)

ROYAL PURPLE LUBRICANTS ALLOWS PLANTS TO ACHIEVE SIGNIFICANT SAVINGS:

0.1% energy savings exceed the total lubrication cost. — Lubricant cost as a percentage of energy cost was 0.08%.

3% maintenance savings would also exceed the lubrication cost. – Lubricant cost as a percentage of maintenance cost was 2%.

If this plant were to achieve an energy savings of 2% and a maintenance savings of 30%, it would produce an annual savings of approximately \$3.9 MILLION.

TECHNICAL BENEFITS

З

THE ROYAL PURPLE ADVANTAGE

TECHNICAL BENEFITS

OTHER IMPORTANT ADVANTAGES

In addition to their superior ability to fully separate and lubricate metal surfaces, Royal Purple's lubricants offer these additional advantages:

I. Longer Oil Life

Royal Purple's oils formulated with Synerlec additive technology last considerably longer than other mineral and synthetic oils. Synerlec additive technology protects against oil oxidation, which causes oils to break down, to thicken and to form corrosive acids, sludge, varnish or lacquer deposits in equipment. This greatly increases oil life, reducing the amount of oil purchased and disposed of. Equipment will remain cleaner and will have longer life.

II. Excellent Corrosion Protection

Synerlec additive technology provides superior protection against rust and corrosion in both salt and freshwater environments. Royal Purple's Synerlec additive technology ionically bonds with all metal surfaces displacing moisture. Synerlec's tough film strength protects during operation, acts as a preservative oil during shutdown and provides instant lubrication upon startup until a full fluid oil film is established.

III. Rapidly Separates from Water

Water in oil means death to bearings. Many oils form milky oil-water emulsions, which greatly shortens the life of both the oil and the equipment it lubricates. Royal Purple's synthetic lubricants rapidly and completely separate from water, allowing water to easily be drained from the bottom of the oil reservoir.

IV. Additional Additive Technologies

following three additional additive technologies:

A. Synslide[®] additive technology — This exclusive additive technology offers all of the performance advantages of Synerlec additive technology plus superior protection against boundary lubrication (lubrication between two rubbing surfaces without development of a full-fluid lubricating film) conditions typically caused by heavy loads, shock loads and slow operating speeds. Royal Purple's noncorrosive, extreme pressure (EP) gear oils and greases contain Synslide additive technology.

B. DynaGlyde® additive technology — Royal Purple's high film strength, noncorrosive DynaGlyde additive technology contains special anti-wear additives, oiliness properties and cushioning molecules to provide the lubricity necessary to excel in worm gear lubrication.

C. Purolec® additive technology — Royal Purple's NSF Certified oils for H1 service for use in pharmaceutical and food service plants contain Purolec additive technology. This proprietary, stable, anti-wear additive technology reduces wear yet still meets the FDA's CFR Title 21 Section 178.3620(b) purity regulation.

V. Oil Cleanliness

Royal Purple's lubricants are packaged in new, clean steel drums and pails to ensure fluid cleanliness. Additionally, Royal Purple's best-selling bearing and hydraulic lubricants are filtered to a typical ISO 4406:99 cleanliness level of 14/13/11. (See pages 36-37 in technical appendix.) This is typically substantially cleaner than conventional lubricants delivered in steel drums or by bulk delivery. Bearing and hydraulic equipment manufacturers state this improvement in oil cleanliness will increase bearing and hydraulic component life from 300 to 500 percent. (See page 38 in technical appendix.) Royal Purple is the only lubricant manufacturer that has established these high cleanliness requirements for its standard products.

VI. Saves Energy

Energy costs constitute the single largest expense of operating rotating equipment. The typical energy costs for rotating equipment are 20 to 25 times greater than direct maintenance costs. Royal Purple's premium, synthetic lubricants with Synerlec and Synslide additive technologies have extremely low coefficients of friction and are proven to save energy over other mineral and synthetic oils in rotating equipment. In fact, Royal Purple's lubricants frequently produce energy savings from 1 to 3 percent or more. In most instances, these savings exceed the total cost of the oil within several months, turning what was once an oil expense into a profit. Total elimination of lubrication expenses would not produce significant cost savings from the total operating costs of the rotating equipment. However, significant savings can be achieved through small percentage reductions in the large expense items - energy and maintenance costs. See example below.

TECHNICAL BENEFITS

In addition to Synerlec additive technology, Royal Purple formulates lubricants using the

THE ROYAL PURPLE ADVANTAGE

TECHNICAL BENEFITS

Actual Rotating Equipment Budget of a Large Petrochemical Plant		
Item	Annual Cost	Percent
Energy Cost	\$121,461,630	96.02%
Maintenance Cost	\$4,938,122	3.90%
Lubricant Cost	\$99,840	0.08%
Lube Cost as a % of Maint. Cost		2.00%
Lube Cost as a % of Energy Cost	Cost 0.08%	
Source Heinz P. Bloch, P.E.		
Item	Annual Cost	Percent
Energy Cost	\$121,461,630	96.02%
Maintenance Cost	\$4,938,122	3.90%
Lubricant Cost	\$99,840	0.08%
Lube Cost as a % of Maint. Cost		2.00%
Lube Cost as a % of Energy Cost		0.08%
	Sour	ce Heinz P. Bloch, P.E.
2% Energy Savings	\$	2,429,232.60
30% Maintenance Savings	\$1,481,436.60	
Total Savings	\$3,910,669.20	

While the actual budget numbers as well as the potential savings from the use of Royal Purple's lubricants will vary from plant to plant, it is universally true that Royal Purple's lubricants will produce greatly leveraged savings from both the energy and maintenance budgets.

The savings noted in the previous example are not an unrealistic expectation. Many plants have documented millions of dollars in savings per year after converting to **Royal Purple's lubricants.**

PURCHASE PRICE VS. VALUE

What is the cost of oil? Some people may tell you it's the price you paid for it. They may even tell you how much money they've saved when they find a less expensive oil.

But what is the real cost of the oil?

But what is the real cost of the oil?

1. It's the purchase price.

2. It's the cost in service as represented by energy savings.

3. It's the cost of labor and replacement parts.

4. It's the cost of downtime and lost production.

5. It's the oil service life as represented by oil drain frequency.

6. It's the cost of used oil disposal.

SUMMARY OF CUSTOMER BENEFITS

I. HIGH FILM STRENGTH

Royal Purple's lubricants are considerably strop than other synthetic oils.

II. LONGER OIL LIFE

Royal Purple's lubricants last significantly los than other synthetic oils.

III. OUTSTANDING CORROSION PROTECTION

Royal Purple's lubricants provide greater protect than traditional circulating and EP oils.

IV. EXCELLENT DEMULSIBILITY

Royal Purple's lubricants do not emulsify water, thereby saving equipment and oil char by rapidly and completely separating from wa

V. SAVES ENERGY

Royal Purple's lubricants reduce energy costs.

VI. HIGH CLEANLINESS

Royal Purple's bearing and hydraulic oils substantially cleaner than conventional lubric delivered in steel drums or by bulk delivery.

"Using Synfilm in tests on nine piece: equipment, average energy savi were 2.54 percent, which paid the incremental cost of the m expensive oil in just 19 days."

> -Maintenance Superintendent, **Chemical Plant**

CUSTOMER FEEDBACK

Actual testimonies from Royal Purple customers

"In 1995, we had fifty-six documented mill motor trip outs due to over temperatures on motor bearings. During 1996 and now the 1997 season, we have had only one alarm and it was due to the high speed coupling tightening up from lack of grease." -Maintenance Superintendent, Chemical Plant

"Prior to making the switch, we experienced eight to ten gear box failures a year, at a cost of more than \$10,000 each. After converting to Royal Purple Synfilm GT 150, we have experienced only one failure in the past year."

-Maintenance, Area specialists, Chemical Plant

"Recently I did a 16,000 hour inspection on two D-399 Caterpillar engines. I was completely surprised at the condition of the main bearings, camshaft and cylinders. There was virtually no wear found in the engines." -Assistant Superintendent, Oil Exploration Company

"I knew Royal Purple performed well when contaminated with water.... The Royal Purple protected the gears even though there was more seawater than Royal Purple at times." - Captain, Tugboat

"Over the past three years, these engines have accumulated in excess of 14,000 hours without an oil change." -Maintenance Superintendent, Offshore Drilling Contractor

"We had amazing results. We not only exceeded a 30 to 40°F temperature drop, but also noticed that there was less vibration in the unit." -Maintenance Superintendent, Offshore Drilling Contractor

"I am very pleased to report that after changing to Royal Purple Synfilm ISO 32, a dramatic decrease in downtime of approximately fifty percent has been experienced." -Supervisor, Gas Plant

"Royal Purple is proving each and every day to be the best lubrication in reciprocating compressors in services ranging from hydrogen to butane to isobutane." -Rotating Equipment Reliability Superintendent, Refinery

"This product works great in everything. In loaders alone, scheduled oil changes were every two hundred hours. With your product, we now . . . oil change every thousand hours." -Maintenance Supervisor, Fertilizer Plant

"Based on our data, using the synthetic oil Royal Purple in all lubricated equipment should provide a 4 percent to 8 percent reduction in electrical consumption. This reduction is valued between \$150,000 and \$220,000 a year." -Maintenance Superintendent, Refinery

What is the Royal Purple Advantage? "Uncompromised Lubrication Performance"

SYNTHETIC PUMP LUBRICANT FOR ALKALINE SERVICE (WITH SYNERLEC')

Alkalube is recommended for lubricating compressors in alkaline environments.

Alkalube minimizes the effects of bases on the oil and caustic damage to metallic components, which greatly extends both the life of the oil and the pumps. Alkalube also contains Royal Purple's proprietary Synerlec additive technology, which is a high film strength, synthetic additive system that is proven to make equipment run smoother, cooler, quieter, longer and more efficiently. Alkalube is an undyed product.

BARRIER FLUID[®] FDA BUFFER/BARRIER FLUID FOR DOUBLE, DUAL & TANDEM MECHANICAL SEALS

Barrier Fluid FDA is a pure, non-reactive, synthetic fluid that provides superior lubrication and cooling for double and tandem mechanical seals. Barrier Fluid FDA provides very stable seal performance over an extremely wide temperature range, satisfying most seal service requirements. Barrier Fluid FDA is extremely clean and has excellent low temperature fluidity and heat transfer properties. Barrier Fluid FDA is sanctioned under the FDA CFR Title 21 Sections 178.3620(a)(b); 172.878; 175.105; 176.200 and 210; 177.2260, 2600 and 2800; 178.3570 and 3910. It is NSF Certified for H1 service. Barrier Fluid FDA is essentially inert, allowing it to be used with most hydrocarbon gases and aqueous acids and bases. Barrier Fluid FDA is an undyed product.

BARRIER FLUID[®] GT

BUFFER/BARRIER FLUID FOR DOUBLE, DUAL & TANDEM MECHANICAL SEALS

Barrier Fluid FDA is a pure, non-reactive, synthetic fluid that provides superior lubrication and cooling for double and tandem mechanical seals, Barrier Fluid FDA provides very stable seal performance over an extremely wide temperature range, satisfying most seal service requirements. Barrier Fluid FDA is extremely clean and has excellent low temperature fluidity and heat transfer properties. Barrier Fluid GT is recommended for use at elevated temperatures where a nitrogen purge is not an option and when FDA purity is not required. Barrier Fluid GT has similar physical properties to Barrier Fluid FDA plus additional oxidation stability. Barrier Fluid GT is an undyed product.

BIOMAXTM EAL GEAR OIL ENVIRONMENTALLY FRIENDLY GEAR OIL (WITH SYNERLEC')

Royal Purple's BioMax EAL Gear Oil is environmentally acceptable, high performance lubricants formulated for those users of gear oil products in marine applications affected by the 2013 Vessel General Permit (VGP). As an Environmentally Acceptable Lubricant (EAL), BioMax is Readily Biodegradable, exhibits extremely low aquatic toxicity, and is non-bioaccumulative. BioMax EAL Gear Oil provides excellent performance in severe marine applications such as thrust gears, steering gears, stern tube and other marine gear functions. The long life and high film strength of BioMax EAL Gear Oil greatly increases equipment reliability as well as provides excellent protection in highly corrosive environments. It gains its performance advantage over competing oils through its superior blend of base oils plus Roval Purple's proprietary Synerlec® additive technology. This unique, synthetic additive technology is proven to make bearings and equipment run smoother, cooler, quieter, longer and more efficiently, BioMax EAL Gear Oil carries the EU Ecolabel.

BIOMAXTM EAL HYDRAULIC OIL ENVIRONMENTALLY FRIENDLY HYDRAULIC OIL (WITH SYNERLEC)

Royal Purple's BioMax EAL Hydraulic Oil is environmentally acceptable, high performance lubricants formulated for those users of hydraulic oil products in marine applications affected by the 2013 Vessel General Permit (VGP). As an Environmentally Acceptable Lubricant (EAL), BioMax is Readily Biodegradable. exhibits extremely low aquatic toxicity, and is non-bioaccumulative. BioMax EAL Hydraulic Oil provides outstanding performance in marine hydraulic systems, both subsea and on-deck. The long life and high film strength of BioMax EAL Hydraulic Oil greatly increases equipment reliability as well as provides excellent protection in highly corrosive environments. It gains its performance advantage over competing oils through its superior blend of base oils plus Royal Purple's proprietary Synerlec® additive technology. This unique, synthetic additive technology is proven to make bearings and equipment run smoother, cooler, guieter, longer and more efficiently, BioMax EAL Hydraulic Oil carries the EU Ecolabel,

BIOMAXTM STERN TUBE EAL ENVIRONMENTALLY ACCEPTABLE STERN TUBE LUBRICANT

Roval Purple's BioMax Stern Tube Oil is an environmentally acceptable, synthetic, high performance lubricant formulated for stern tube lubrications in marine applications. As an Environmentally Acceptable Lubricant (EAL), BioMax is Readily Biodegradable, exhibits extremely low aguatic toxicity, and is non-bioaccumulative. This product is European Ecolabel approved, meets the US EPA 2013 Vessel General Permit (VGP) guidelines as an Environmentally Acceptable Lubricant (EAL). BioMax Stern Tube Oils are biodegradable, non-emulsifying, non-bioaccumulative, minimally toxicity, provides excellent seals compatibility in preventing leakage, protection for bearings, propeller shaft and stern tube systems at varying operating temperature conditions. The long life and noncorrosive BioMax Stern Tube Oil greatly increase reliability, efficiency as well as exceptional thermal and oxidative stability at high temperatures in highly corrosive environments. It gains its performance advantage over competing oils through its superior blend of renewable synthetic base oils plus Royal Purple's proprietary Synerlec[®] additive technology. This unique, synthetic additive technology is proven to prevent bearing failures, corrosion, rust, reduce equipment downtime, provides longevity and energy savings.

CAP[™] CYLINDER AND PACKING GLAND LUBRICANT (WITH SYNERLEC[®])

CAP is recommended for use in gas, reciprocating compressors such as hydrogen, nitrogen, ethylene, carbon dioxide, methane, ethane, butane, propane, propylene, helium, LPG, etc. Cap is commonly used in gas reinjection compressors.

CAP is a synthetic, compressor lubricant that forms a tacky, tenacious and tough oil film on both metal and ceramic surfaces. It is extremely shear stable, water resistant and impermeable to water vapor and hydrocarbon gases. CAP minimizes wear in high pressure compressors and is commonly used in gas reinjection compressors.

CLEAN & FLUSHTM OIL CIRCULATION SYSTEM CLEANER

Royal Purple's Clean & Flush is a safe, effective and inexpensive product for cleaning sludge and varnish from equipment while in service.

Clean & Flush can be used in three ways: First, Clean & Flush can be added to an existing oil to clean varnish and sludge from equipment prior to draining the existing oil. Second. Clean & Flush can be used as a temporary oil fill to clean varnish and sludge from equipment before refilling with new Royal Purple oil. And third. Clean & Flush can be used as a temporary oil fill for cleaning and flushing a polyglycol oil that is incompatible with the new oil to be used (i.e. when changing from a polyglycol oil to a Royal Purple PAO or para-synthetic oil. Clean & Flush is an undved product.

CMTTM MANUAL TRANSMISSION FLUID

Royal Purple CMT oil meets the requirements for Caterpillar TO-4: Allison C-4. CF-2 and CF: Eaton: and Dana manual transmissions. Recommended for MT-1 applications and caterpillar powershift.

Roval Purple CMT contains a blend of premium mineral and synthetic lubricants, which provide greater oxidation protection, low temperature fluidity and shock loading protection than conventional oils. This promotes greater oil life, smoother brake operation, reduced gear wear, controlled powershift transmission friction and more reliable equipment operation.

COUPLING GREASE™

Royal Purple's Coupling Grease is a lithium complex, high film strength grease that provides superior resistance to oil separation from the high centrifugal forces generated by couplings. It is formulated with high viscosity synthetic oils and tacky, synthetic polymers, plus Royal Purple's proprietary Synslide additive technology to provide the tenacity and film strength necessary to protect against heavy loads and high centrifugal forces.

SYNTHETIC COUPLING GREASE (WITH SYNSLIDE[®])

CRYSTAL-CLEAR® SYNTHETIC WHITE OIL (UNDYED PRODUCT)

Crystal-Clear is recommended for lubricating gas compressors where the oil may come into contact with catalysts downstream of the compressor.

Crystal-Clear is a pure, nonreactive lubricant that has excellent anti-wear properties. It provides very good protection against rust and corrosion yet will not poison catalysts downstream of the compressor. Crystal-Clear resists dilution from hydrocarbon gases, effectively preventing both compressor and packing gland wear. It is a superior lubricant for hydrogen, hydrogen chloride, sulfur dioxide, nitrogen, carbon monoxide, carbon dioxide and helium compressors. It also excels in the lubrication of hyper compressors and hydrocarbon gas compressors such as ethylene, methane, ethane, butane, propane, acetylene, propylene, helium, LPG, etc. Crystal-Clear meets all of the requirements of a white mineral oil but has the superior lubrication of a synthetic oil, Crystal-Clear high viscosity index, thermal stability, low coefficient of friction and high specific heat index enable it to outperform white mineral oils over an extremely wide temperature range. Crystal-Clear is an undyed product.

CRYSTAL PURE® SYNTHETIC X GRADE COMPRESSOR LUBRICANT

Crystal Pure "X" Grade lubricants are pure, inert, ash-less, and non-reactive making them an excellent choice for hyper compressors, and high/low pressure process gas compressors. Crystal-Pure lubricants are insoluble in most process gases, resist dilution by process gases, and are non-poisonous to process catalysts. This provides a lubricants that has extended useful life, and that extends the life of cylinders, rings and packing. Crystal-Pure can be used in compressor services requiring compliance with FDA regulations Title 21, CFR 121.2511; CFR 177.1430; CFR 178.3570; and CFR 178.3910. 1X, 2X grades meet Ingersoll-Rand viscosity requirements; 40X, 60X grades meet Cooper-Bessemer viscosity requirements.

DEZEL HI-BASE® HIGH SULFUR FUEL DIESEL ENGINE OIL (WITH SYNERLEC')

Dezel Hi-Base is a synthetic blend engine oil recommended for diesel engines operating on high sulfur fuels sometimes used in South America, Africa, Asia and Mexico. The high sulfur content of the fuel requires the use of engine oils with higher alkalinity (higher TBN) to neutralize the increased acidity caused by the fuel. Generally, the required base number (TBN) of the engine oil is 20 times the sulfur content of the fuel. Dezel Hi-Base is also formulated with Royal Purple's proprietary Synerlec additive so it provides superior film strength and wear protection along with the increased acid neutralization benefits. For sale and use only outside of the US and Canada.

DURALECTM SUPER MOTOR OIL HIGH PERFORMANCE SYNTHETIC DIESEL ENGINE OIL

Royal Purple Duralec Super motor oil is a high performance engine oil made for emission-controlled diesel engines utilizing emissions equipment such as: DPF's, Catalytic Converters, EGR, and SCR injection. Royal Purple Duralec Super 10W-30 and 15W-40 are API CK-4 engine oils. Royal Purple Duralec Super motor oil is specifically formulated to maximize component life, extend drain intervals and improve fuel performance. These premium lubricant formulations provide excellent high temperature resistance and low temperature pumpability, outstanding soot dispersancy, improved rust and corrosion protection, and prevention of varnish and sludge formation.

ENDUROSYN GREASE[®] MULTI-PURPOSE SYNTHETIC GREASE

Endurosyn Grease satisfies a wide range of grease requirements and is recommended for bearings and general purpose use.

Endurosyn Grease is high performance calcium sulfonate complex synthetic grease. Its outstanding performance is achieved through its superior blend of synthetic base oils plus Synslide - Royal Purple's unique proprietary EP additive technology. This unique additive technology is proven to increase the reliability and efficiency of bearings helping to make them run smoother, cooler and quieter. When combined with a premium calcium sulfonate thickener, Endurosyn provides unsurpassed protection against corrosion and water washout through its inherent chemical characteristics. Endurosyn Grease significantly increases bearing life by combining superior film strength with the ability to micro-mend the bearing surfaces, allowing for normal equipment operations under severe conditions.

HD MOTOR OIL HIGH PERFORMANCE ENGINE OIL (WITH SYNERLEC')

HD Motor Oil is recommended for use in gasoline and diesel automotive, commercial fleet and stationary industrial engines.

HD Motor Oil is a long life, high film strength engine oil that greatly exceeds the performance of other premium mineral and synthetic oils. HD Motor Oil reduces engine wear, extends drain intervals, saves fuel, increases horsepower, keeps engines clean and meets new engine warranty requirements.

Note: Follow manufacturer's oil change recommendations during warranty.

HP 2-C[®] 2-CYCLE GASOLINE ENGINE OIL (WITH SYNERLEC[®])

HP 2-C is recommended for use in both pre-mixed and injected gasoline 2-cycle engines.

HP 2-C is a high performance engine oil that improves performance and reduces wear in both standard and high performance 2-cycle gasoline engines. HP 2-C synthetic solvency keeps spark plugs and exhaust ports clean for maximum engine efficiency. This engine cleanliness combined with HP 2- C's low coefficient of friction promotes increased horsepower and engine speed. Engines operate with greater combustion efficiency and go longer between overhauls when lubricated with HP 2-C.

HPS™

HIGH PERFORMANCE ENGINE OIL (WITH SYNERLEC")

HPS is recommended for use in gasoline and diesel automotive, commercial fleet and stationary industrial engines.

HPS (High Performance Street Motor Oil) is a long life, high film strength engine oil that greatly exceeds the performance of other premium mineral and synthetic oils. HPS is fortified with a high level of zinc/phosphorus anti-wear additive and Royal Purple's proprietary Synerlec additive technology. HPS Series of motor oil responds to increased pressure with increased viscosity. It's advanced additive technologies improve the condition of metal-to-metal contact under severe conditions for greater protection. All viscosities of HPS, excluding 5W-20, are formulated for use in gas and/or diesel engines.

HY-THERMTM 707 SYNTHETIC HEAT TRANSFER OIL

Hy-Therm 707 is a synthetic heat transfer oil that is more efficient than mineral oil based fluids. Its thermal conductivity (0.121 BTU/hr ft °F at 400°F) is 50% to 100% higher than many widely used heat transfer fluids. This means that heat energy is absorbed and released by Hy-Therm much more quickly than typical mineral heat transfer fluids. Hy-Therm 707 also has a significantly higher heat capacitance than typical mineral heat transfer fluids. In open systems, Hy-Therm can safely be used at operating temperatures up to 400°F. Closed systems with inert gas (e.g. nitrogen) blanketing can safely operate with Hv-Therm 707 up to 700°F. Hv-Therm 707 is an undved product.

MARINE HYDRAULIC OIL SYNTHETIC BLEND HYDRAULIC OIL (WITH SYNERLEC')

Marine Hydraulic Oil is a high performance, inherently biodegradable, environmentally responsible and ashless formula that protects equipment and the environment.

Marine Hydraulic Oil meets the U.S. Fish and Wildlife Department's and the EPA's toxicity test requirements for marine life. Marine Hydraulic Oil is an excellent, high performance, hydraulic oil for use in sensitive environments such as off-shore platforms and other marine related services. The long life and high film strength of Marine Hydraulic Oil greatly increases equipment reliability and provides excellent protection in highly corrosive environments. It gains its performance advantage over competing oils through its superior blend of base oils plus Royal Purple's proprietary Synerlec additive technology. This unique, synthetic additive technology is proven to make bearings and equipment run smoother, cooler, quieter, longer and more efficiently.

MAX ATE PARAFILM

MAX ATF[®] AUTOMATIC TRANSMISSION FLUID

Max ATF is a premium synthetic, multi-spec automatic transmission fluid

Max ATF synthetic, automatic transmission fluid is a high performance, long life, multi-purpose transmission fluid. Max ATF is more oxidation stable than other transmission fluids and greatly resists breakdown from heat and loss of proper lubricity.

*Mercon® is a registered trademark of the Ford Motor Company. *Dexron® is a registered trademark of the General Motors Corporation.

PRODUCT	cSt @40°C	cSt @100°C	VI	Flash Point °F / °C	Pour Point °F / °C
Max ATF	36	7.3	177	420 / 216	-76 / -60

MAX-CHAIN[®] DRY FILM/EP LUBRICANT (WITH SYNERLEC®)

Max-Chain is recommended for chains and open gears operating in dusty environments.

Max-Chain is an advanced, high performance, synthetic lubricant that provides excellent protection for chains, open gears and exposed metal surfaces subjected to severe loading — even in wet, acidic environments, Max-Chain is a unique, thixotrophic lubricant blended with a solvent carrier. It can be easily applied by either spraving or brushing. Once applied the carrier film evaporates, leaving a tenacious, dry, wax-like film. This non-tacky film effectively minimizes the collection of abrasive dust and other airborne contaminants. Its dry lubricant film performance is enhanced with EP properties to greatly reduce wear and to effectively extend equipment life. Max-Chain can lubricate up to 400°F (after carrying solvent has evaporated) and provides excellent protection against rust and corrosion. Max-Chain is an undyed product. Note: Caution — Consult manufacturer for high temperature applications.

MAX-GEAR® HIGH PERFORMANCE GEAR OIL (WITH SYNERLEC')

Max-Gear is recommended for truck and automotive differentials, outboard motor lower units or in rear axles or manual transmissions requiring an API fluid.

Max-Gear is a high performance automotive gear oil designed to provide maximum protection to heavily loaded gears while increasing power throughput through the drive train. Max-Gear virtually eliminates both gear and bearing wear-even under severe squeeze film conditions caused by extremely high loads, sudden shock loads or low RPMs. Slippery, synthetic molecules not only reduce wear and friction but significantly increase Max-Gear's cold weather fluidity and lubricity, making it the ideal choice for vehicles operating in cold climates. Gears run smoother, quieter, cooler and longer without overhauls. It is noncorrosive to both ferrous and nonferrous metals.

MAX-TUFF[™]

ASSEMBLY LUBE (WITH SYNSLIDE[®])

Max-Tuff is an ultra-tough, synthetic lubricant designed for use in reassembling repaired equipment. Max-Tuff utilizes unique, synthetic molecules that adhere tenaciously to metal surfaces to create a formidable, load-bearing physical barrier between surfaces. This minimizes the possibility of boundary conditions (metal-to-metal contact) while providing excellent protection to both ferrous and nonferrous metals against rust and corrosion.

PRODUCT	cSt @40°C	cSt @100°C	VI	Flash Point °F / °C
Max-Tuff	650	47.8	125	300 / 149

NGL-NS[™] HYDROCARBON GAS COMPRESSOR OIL

NGL-NS is a premium, synthetic lubricant specifically designed to increase the service life of reciprocating gas compressors in hydrocarbon service where sulfur-sensitive catalysts are present downstream of the compressor.

NGL-NS is virtually sulfur free and is formulated with dense, closely packed, synthetic molecules to greatly resist dilution from compressed hydrocarbon gases. It is also extremely hydrophobic and rapidly separates from water, which protects bearings and other components from rust and corrosion. NGL-NS makes gas compressors run longer with minimum wear. NGL-NS is an undyed product.

PAPER MILL GREASE

processing applications using a single grease.

Paper Mill Grease is the appropriate bearing lubricant for all paper machine bearings from the wet end through the dry end operating at speeds of 1500 RPM to 6500 RPM. Due to its superior film strength, it is highly recommended on wet end roll bearings, wire return rolls, couch rolls, suction press rolls, granite or synthetic covered press rolls and wet felt rolls. It is also recommended for dry end rolls such as dryer felt rolls, coater rolls, calendar rolls, winder rolls and super calendar rolls. (For shafts in excess of seven inches in diameter or speeds in excess of 3000 RPM, consult your Royal Purple representative or call Royal Purple's technical support staff at 281-354-8600.) Royal Purple Paper Mill Grease's versatility allows its use in auxiliary equipment such as pumps, refiners, fans and conveyors.

SYNERGY® HIGH PERFORMANCE EP GEAR OIL (WITH SYNSLIDE[®])

Royal Purple's best-selling EP gear oil, Synergy is designed to smoothly lubricate industrial gears under virtually all conditions.

Synergy is an ultra-tough, long life, gear oil with slippery, synthetic molecules, which greatly increase its lubricity and oiliness properties. Gears run smoother, quieter, cooler and longer without overhauls. Synergy is noncorrosive to both ferrous and nonferrous metals. Its ability to rapidly and completely separate from water prevents sludge and wear commonly found in wet gear boxes (such as cooling tower gear boxes). Synergy employs a dense, high molecular weight, synthetic cushioning additive to prevent fatigue failure in gears subjected to sudden shock loads. (Visit royalpurpeindustrial.com and download the "Gear Lubrication Manual" and "Synergy Product Sheet" for more information.)

SYNFILM[®] SYNTHETIC AIR COMPRESSOR AND INDUSTRIAL OIL (WITH SYNERLEC')

Royal Purple's best-selling industrial lubricant, Synfilm is recommended for use in air compressors, pumps, bearings, gears, air tools, etc.

Synfilm is a clean, dry, long life, high film strength, energy efficient, synthetic lubricant that significantly increases bearing life and equipment reliability. Synfilm rapidly and completely separates from water and provides excellent protection against rust and corrosion. Synfilm users experience lower operating temperatures, reduced bearing vibration, extended oil drain intervals and longer equipment life.

SYNFILM[®] GT MULTI-PURPOSE SYNTHETIC INDUSTRIAL OIL (WITH SYNERLEC')

Synfilm GT is recommended for use in gas and steam turbines, blowers and vacuum pumps, bearings, gears, air tools, etc. Synfilm GT should be considered instead of Synfilm when: oil reservoir temperatures exceed 175°F, improved low temperature fluidity is desired or when a viscosity grade is not available in Synfilm.

Synfilm GT is a clean, dry, long life, high film strength, energy efficient, synthetic lubricant that significantly increases bearing life and equipment reliability. Synfilm GT rapidly and completely separates from water, has very low temperature fluidity, provides excellent protection against rust and corrosion and is extremely oxidation stable, allowing for long oil life and extended oil drain intervals.

SYNFILM[®] GT WIND GEAR 320 SYNTHETIC WIND TURBINE GEAR BOX OIL (WITH SYNERLEC)

Synfilm GT Wind Gear 320 provides the same benefits as Synfilm GT, with respect to dryness, high film strength and oxidation resistance, but is also tailored to the needs of wind turbine gear boxes with enhanced filtration and anti-foam characteristics. This product provides increases in operational efficiency and enhanced protection against micro-pitting of gear faces. Synfilm GT Wind Gear 320 is an un-dyed product.

SYNFILM[®] NGL HYDROCARBON GAS COMPRESSOR OIL (WITH SYNERLEC')

Synfilm NGL is a long life, high film strength, synthetic lubricant specifically designed to increase the service life of rotary screw, centrifugal, rotary vane and reciprocating gas compressors in hydrocarbon service. Synfilm NGL is the ideal lubricant for gas compressor service because it is formulated with dense, closely packed molecules to greatly resist dilution from compressed hydrocarbon gases. Its high film strength protects bearings, cylinders, rings and rider bands from wear. Synfilm NGL has excellent thermal and oxidation stability to minimize deposits and to extend oil drain intervals. It also has a low coefficient of friction to maximize energy savings and to protect bearings and other components from rust and corrosion.

SYNFILM[®] RECIP RECIPROCATING AIR COMPRESSOR OIL (WITH SYNERLEC®)

Synfilm Recip. is a long life, high film strength, energy efficient, synthetic lubricant that excels in the lubrication of reciprocating air compressors. Synfilm Recip. has excellent solvency properties and outstanding oxidation stability that virtually eliminates carbon build-up on discharge valves, a common problem for reciprocating compressors.

THERMASILTM T-100 MAXIMUM LOAD SILICA GEL SYNTHETIC GREASE (WITH SYNSLIDE')

Thermasil T-100 is a viscous, water resistant, tacky grease designed to protect extremely heavily loaded, low speed bearings or sliding surfaces (such as open gears, skid-rails, etc.) that operate in wet or hot environments where other EP greases perform poorly or even fail. Thermasil T-100 is extremely resistant to water washout and provides excellent corrosion protection. It is especially suited for lubricating very low speed, heavily loaded bearings. bushings, pinions, gears, sliding surfaces, etc. Thermasil T-100 is an undyed product.

Thermasil T-100	4866	n/a	0

THERMAXTM 680 GREASE SPECIAL PURPOSE EP GREASE (WITH SYNSLIDE')

Thermax 680 Grease is recommended for low speed or high temperature bearings requiring the use of a grease formulated with a heavy base oil.

Thermax 680 Grease is a special purpose, ultra-tough, aluminum complex, synthetic grease. It is designed to lubricate equipment requiring grease with a high viscosity base oil. Thermax 680 Grease has very good oxidation stability, greatly resists water washout and provides rust and corrosion protection to both ferrous and nonferrous metals. Thermax 680 Grease excels in bearings and sliding surfaces that operate at low speeds, under heavy or shock loads, at high temperatures or in wet environments. Typical applications can be found in steel mills, paper mills or in marine service.

THERMYL-GLYDE®

temperatures are encountered.

Thermyl-Glyde is an ultra-tough, multi-synthetic lubricant for severe service gears, bearings, couplings and ways. Thermyl-Glyde is noncorrosive to both ferrous and nonferrous metals and rapidly and completely separates from water, preventing the sludge and wear commonly found in wet gear boxes. Thermyl-Glyde employs a dense, high molecular weight, synthetic cushioning additive to prevent fatigue failure in gears subjected to sudden shock loads. (For more information, ask for our "Gear Lubrication Manual" and "Thermyl-Glyde Product Sheet".

THERMYL-GLYDE[®] WORM GEAR OIL SYNTHETIC GEAR OIL (WITH DYNAGLYDE*)

Thermyl-Glyde Worm Gear Oil is recommended for use in very heavily loaded, slow speed and/or high temperature worm gear service.

Thermyl-Glyde Worm Gear Oil is a high film strength, slippery, synthetic lubricant with special anti-wear additives to provide the lubricity and oiliness properties necessary to excel in worm gear lubrication (including cylindrical and double enveloping worm gears). Thermyl-Glyde Worm Gear Oil utilizes a dense, high molecular weight, synthetic cushioning additive that protects against fatigue failure from sudden shock loads. Thermyl-Glyde Worm Gear Oil is noncorrosive to both ferrous and nonferrous metals, has excellent oxidation stability and water separating properties and will not turn rancid (a common problem with other worm gear oils). Textron/Cone drive approved.

PRODUCT	cSt @40°C	cSt @100°C	VI	Flash Point °F / °C	AGMA/ ISO Grade

SEVERE SERVICE GEAR AND BEARING OIL (WITH SYNSLIDE®)

Thermyl-Glyde gear oil has all of the advantages of Synergy but is recommended where heavy loads, shock loads, low operating speeds and/or high operating

THERMYL-TUFF[™] MAXIMUM LOAD SYNTHETIC LUBRICANT (WITH SYNSLIDE®)

Thermyl-Tuff is recommended for heavily loaded open gears, skid rails, bushings, couplings, bearings, cables, etc., or low speed bearings operating at high temperatures.

Thermyl-Tuff is a viscous, tacky, semi-fluid lubricant that protects extremely heavily loaded sliding surfaces such as open gears, skid rails, etc., where other EP products perform poorly or even fail. Thermyl-Tuff cannot be washed off by water and its superior, synthetic corrosion inhibitors provide outstanding protection in wet and/or corrosive environments. Thermyl-Tuff is an undyed product.

PRODUCT	cSt @40°C	cSt @100°C	VI	Pour Point °F / °C

ULTRA-PERFORMANCE® GREASE SYNTHETIC GREASE (WITH SYNSLIDE')

Ultra-Performance Grease satisfies the widest range of grease requirements and is recommended for bearings and general purpose use.

Ultra-Performance Grease is a high performance, aluminum complex grease. It has outstanding EP capabilities and excellent water resistance to both emulsion and washout. Ultra-Performance Grease can be pumped at low temperatures, is stable at high temperatures and has excellent oxidation resistance to extend service life and to provide a margin of safety between lubrication intervals.

PRODUCT	Base Oil cSt @40°C	Base Oil cSt @100°C	-		Worked Cone Penetration	4-Ball Weld Load, kgf

UNI-TEMP[™] SYNTHETIC REFRIGERATION OIL (WITH SYNERLEC®)

Uni-Temp is a long-life, high film strength refrigeration lubricant that provides superior performance in both rotary screw and reciprocating refrigeration compressors. Uni-Temp is wax free and remains fluid at temperatures as low as -90°F/-67°C. By not congealing on the evaporator coils, cooling efficiency is maximized and the need for system shut down to clean the coils is eliminated. Uni-Temp is proven to virtually eliminate high oil consumption problems while producing average documented energy savings that exceed 5%. Uni-Temp is recommended for use with ammonia, propane and all fluorocarbon (CFC, HCFC) refrigerants, including R-12, R-22, R-114, etc. Uni-Temp has not been extensively tested in service with HFC refrigerants. Uni-Temp is NSF certified for H2 service and is an undyed product.

VPTM PRESERVATIVE OIL 10 VAPOR PHASE CORROSION INHIBITOR

VP Preservative Oil 10 is recommended for use to prevent rust and corrosion in engines, gearboxes and other closed systems that will be stored for periods up to one year or more.

VP Preservative Oil 10 is an oil that prevents rust and corrosion of all metal surfaces to which it is applied. It also fills closed spaces with vapors that prevent rust and corrosion of surfaces not contacted by the oil. VP Preservative Oil 10 is an undyed product.

PRODUCT	Base Oil cSt @40°C	Fla Point °F / °C

COMMON INDUSTRIAL LUBRICANTS

ROYAL PURPLE RECOMMENDATIONS

The industrial and racing markets associate outstanding quality and superior performance with Royal Purple. This reputation has been earned through Royal Purple's relentless pursuit of excellence in lubrication.

Royal Purple formulates the most advanced lubricants available on the market today. If you currently use Royal Purple's products, you already know this. If you do not, they offer the opportunity to greatly improve the reliability and efficiency of your equipment and to lower your operating costs.

R&O Oils	Anti-Wear (AW) Hydraulic Oils	Extreme Pressure Gear Oils
These are generally mineral oils containing small amounts of rust and oxidation inhibitors and no anti-wear additives. R&O oils are sometimes referred to as circulating oils, turbine oils, gear and bearing oils or simply by their AGMA gear oil classification (example AGMA 5 R&O gear oil).	These are generally mineral oils that contain anti-wear additives along with rust and oxidation inhibitors.	These are generally mineral oils that contain sulfur phosphorous additives that generally meet AGMA EP performance requirements.
Some of the most common brand names of R&O oils are:	Some of the most common brand names for AW hydraulic oils are:	Some of the most common brand names for EP gear oils are:

BEARING LIFE FORMULA

ISO ADJUSTED BEARING LIFE FORMULA FOR ANTIFRICTION BEARINGS

The ISO adjusted bearing life formula is used by bearing manufacturers and equipment design engineers to predict the service life of antifriction bearings.

THIS FORMULA ILLUSTRATES:

1. The quality of lubrication is as important as the mechanical factors in determining the bearing life.

2. Oil film thickness must at least equal the combined surface roughness of the bearing and race in order for the bearing to reach its design life in service.

3. Bearing life is increased in direct proportion to:

a) the percentage increase in the thickness of the oil film.

b) the percentage reduction in the composite surface roughness.

BEARING LIFE IS GREATLY INCREASED BY A COMBINATION OF BOTH A & B.

Note: Less than 10 percent of bearings in service ever reach their design life; however, improving relative oil film thickness can increase bearing life up to 4 times its design life.

Royal Purple's oils with Synerlec additive technology greatly increases bearing life by both increasing oil film thickness and smoothing bearing surfaces.

"Our vibration analyst predicted bearing failure was imminent, so we decided to try Royal Purple. We replaced the SAE 30 Shell oil with Royal Purple Synfilm 100 and the vibration and noise abated immediately and ran for eleven months."

MIRCO-MENDING REDUCES VIBRATIONS

200 HP Roots Blower at a chemical plant is experiencing high vibrations while being lubricated with a competitor's ISO 320 EP gear oil.

MICROSCOPIC PHOTOS OF MICRO-MENDING

ISO 4406:99 CLEANLINESS LEVEL STANDARDS

OIL CLEANLINESS

Clean oil greatly extends the life of bearings and equipment. Most oils are not clean. They don't look dirty, but they are full of small particles in the 2 to 30 micron range that the eye cannot see, yet they are very damaging to equipment. These particles consist mainly of fibers, silica (dirt) and metals.

The amounts and sizes of particles can be measured with a laser particle counter and then quantified using the ISO 4406:99 Cleanliness Rating, which reports on the particle content of 1 milliliter of oil (approximately equal to one eye dropper).

	ISO 4406:99 Cleanliness leve	el standards
Range	Number of P	articles per ml
Number	More Than	Up to and Including
24	80,000	160,000
23	40,000	80,000
22	20,000	40,000
21	10,000	20,000
20	5,000	10,000
19	2,500	5,000
18	1,300	2,500
17	640	1,300
16	320	640
15	160	320
14	80	160
13	40	80
12	20	40
11	10	20
10	5	10
9	2.5	5
8	1.3	2.5
7	.64	1.3
6	.32	.64

Note: The classification rating follows a geometric progression where each level decreases in cleanliness and is twice as dirty as the previous level.

OIL CLEANLINESS LEVELS MAY BE REPORTED USING EITHER A TWO OR THREE DIGIT RATING.

The cleanliness level of an oil with a particle count of: $2000 \ge 4$ microns / $500 \ge 6$ microns / $60 \ge 14$ microns would be reported as 18/16/13

Royal Purple's best selling bearing and hydraulic oils are extremely clean, having a typical ISO cleanliness rating of 14/13/11.

QUALITY ISN'T EXPENSIVE. IT'S PRICELESS!™

CLEARANCES OF ROTATING EQUIPMENT

BECAUSE MACHINE CLEARANCES ARE VERY SMALL, OIL SHOULD BE EXTREMELY CLEAN.

Typical Dynamic Clearan	ces of rotating equipment
Component	Dynamic Clearances
Gears	0.1 - 1.0 microns
Journal Bearings	0.5 - 100 microns
Pump, Gear Tooth to Side Plate/to Case	0.5 - 5.0 microns
Pump, Piston Piston to Bore Valve Plate to Cylinder	5.0 - 40 microns 0.5 - 5.0 microns
Pump, Vane Vane Sides Vane Tips	5.0 - 13 microns 0.5 - 1.0 microns
Rolling Element Bearings	0.1 - 1.0 microns
Valves Directional Spool to Sleeve Proportional Spool to Sleeve Servo Spool to Sleeve	2.0 - 8.0 microns 1.0 - 6.0 microns 1.0 - 4.0 microns

Concern for the size and amount of solid particulates that are ≥ 2 microns becomes evident when examining typical mechanical clearances for equipment. Particulates that are larger than the mechanical clearances greatly accelerate wear by abrasion.

	12/9	11/8²	-	_	-	_	-	-	-	-
		1 Life	Extension Fac	tor 1.5			2 Life E	Extension Fact	tor 1.45	

In the above example, improving the ISO 4406:99 cleanliness level of a hydraulic oil from 20/17 to 13/11 will increase hydraulic system life by 6 (600 percent increase).

MEASURING THE BENEFIT OF DRY OIL

		Life Extension Factor (LEF)													
(MPM)	B A	2X	3X	4X	5X	6X	7X	8X	9X	10X					
	50,000	12,500	6,500	4,500	3,125	2,500	2,000	2,000 1,500		782					
Level	25,000	00 6,250 3		2,250	1,563	1,250	1,000	750	500	391					
	10,000	2,500	1,300	900	625	500	400	300	200	156					
Moisture	5,000	1,250	650	450	313	250	200	150	100	78					
Moi	2,500	625	325	225	156	125	100	75	50	39					
ent	1,000	250	130	90	63	50	40	30	20	16					
Current	500	125	65	45	31	25	20	15	10	8					
	250	63	33	23	16	13	10	8	5	4					
	100	25	13	9	6	5	4	3	2	2					

In the above example, reducing the water content of an oil from 500 ppm to 45 ppm would increase the machine life by 4 (400 percent).

Royal Purple industrial lubricants rapidly separate from water, allowing water to easily be drained from the bottom of oil reservoirs. In addition, Royal Purple's proprietary additive technologies ionically bond with all metal surfaces displacing harmful moisture.

1 DROP OF WATER PER LITER OF OIL IS APPROXIMATELY 200 PPM (0.02%)

1.0% Water = 10,000 ppm • 0.1% Water = 1,000 ppm • 0.01% Water = 100 ppm

VALUE OF ENERGY SAVINGS

Royal Purple's lubricants typically produce energy savings that quickly exceed the total cost of the oil. Royal Purple has prepared this chart as a simple means of documenting these savings.

		Doll	ars of	Energy	/ Savin	gs per	1000 o	peratin	g hour	S		1000 hour energy cost
e,	500 H.P.	414.45	828.90	1243.35	1657.80	2072.25	2486.70	2901.15	3315.60	3730.05	4144.50	\$41,445.00
	250 H.P.	207.23	414.45	621.68	828.90	1036.13	1243.35	1450.58	1657.80	1865.03	2072.25	\$20,722.50

Electric	20 H.P.	16.58	33.16	49.74	66.32	82.90	99.48	116.06	132.64	149.22	165.80	\$1,658
Ц	5 H.P.	4.14	8.28	12.42	16.56	20.70	24.84	28.98	33.12	37.26	41.40	\$414
	1 H.P.	0.83	1.66	2.49	3.32	4.15	4.98	5.81	6.64	7.74	8.30	\$83
	Amount of Energy Saved	1%	2%	3%	4%	5%	6%	7%	8%	9%	10%	

This chart provides a simplified method for estimating the total power cost for operating electric motors and documenting the actual dollars saved (through energy savings) as a result of changing to Royal Purple's energy efficient lubricants.

THIS FORMULA ILLUSTRATES:

• A motor efficiency rating of 0.9 was selected because it is a typical value.

• An electrical cost of \$0.10 per kilowatt hour was selected for simplification.

EFFECT OF MOISTURE CONTENT ON MACHINE LIFE

TECHNICAL APPENDIX

INTRODUCING NEW GREASE

HOW TO INTRODUCE A NEW LUBRICANT WHEN GREASE COMPATIBILITY IS UNKNOWN

Often, for one reason or another, it becomes necessary to change the brand of grease used to lubricate a particular machine. If the grease in use may become mixed with a new brand, the question of grease compatibility must be addressed to ensure trouble-free changeover.

Grease compatibility is a complex subject because of the many variables and changing conditions involved. At one end of the scale, mixing a fresh lubricant with a severely oxidized portion of the same lubricant may produce immediate or progressive changes in the mixture. At the other end of the scale, greases with different thickeners may be mixed resulting in hardening or very soft or low melting mixtures, which may not provide adequate lubrication and may lead to early failures. Add to this the diverse operating conditions of time, temperature, and contaminants – and the uncertainties of predicting or measuring compatibility of greases are apparent. There is no practical rule one can apply to all mixtures of different greases to determine compatibility properties.

Grease compatibility tests are run with a 30/70, 50/50 and 70/30 concentration of the two greases tested. Additionally, the temperature is elevated well beyond normal operating range to insure a margin of safety. If testing reveals either marginal compatibility or complete incompatibility between two greases, changing lubricants will require some specific procedures.

RECOMMENDED PROCEDURES TO INTRODUCE NEW GREASE

In order to maintain the integrity of the grease and mitigate any potential damage to the equipment, the following procedures are recommended based on the type of lubricator in service:

AUTOMATIC LUBRICATORS

There is no safe alternative to purging the system and all lines, which will require some downtime for equipment serviced by the lubricator. For a safe purge to be reasonably effective the following are the most important guidelines:

- 1. Exit path for old grease the purge line must be clear, the vent cap must be removed and if the exit path is the grease seal, it must be pliable. If there is no planned or engineered exit path for old grease, the bearings will have to be uncapped and cleaned manually.
- 2. Size of the bearings as bearing size increases, the amount of grease necessary to purge and adequately re-lubricate also increases. Bearings on shafts larger than 10 inches may require almost double the normal amount of grease.
- 3. Even after purging and re-greasing, the vent cap or plug should remain open for several hours to ensure the bearing can adjust to the proper amount of grease. Some re-lubrication may be necessary after resealing the bearing cavity.

MANUALLY LUBRICATED BEARINGS

On manually lubricated bearings, a safe purge of the old grease can normally be accomplished without a significant change in normal re-lubrication practice.

For most bearings that are manually lubricated via an allemite (zerk) fitting and are vented with a plug or vent tube, the following procedure should be adequate:

- 1. Remove the vent cap or plug first. Using the straw extension tube, spray a good supply of Maxfilm into the exit opening. This will soften and remove any caked or plugged grease.
- 2. Remove the grease fitting and follow same procedure with the inlet tube. Care should be taken if equipment is running as some blow-back may occur on faster bearings.
- 3. Allow 5 to 10 minutes for Maxfilm to soften any hardened grease. Re-lubricate with the new grease and pump a sufficient amount of grease until new clean grease is exiting the vent tube or grease seal. Run the equipment for 20 to 30 minutes, recap or plug if necessary and add some grease to compensate for any that was purged while running.
- 4. On larger bearings this may need to be repeated in 24 48 hours.
- 5. On capped or sealed bearing cavities, the bearing will have to opened or exposed so that a thorough flush with Maxfilm can be accomplished. Then simply re-lubricate with the proper amount.

Royal Purple does not recommend the use of solvents or other agents for this type of cleaning Maxfilm is suggested because of its natural solvency combined with its lubricating ability. The residue will not harm the bearing but will in fact help to lubricate during the transition.

As with any oil or grease change if the equipment condition changes, such as an increase in noise, vibration or temperature, re-lubricate immediately.

"When greases made from different thickeners are mixed, the mixture may be poorer in service performance or physical properties than either of the component products. This lessening in performance capability is called incompatibility. It may show up in any of several areas, such as, (1) lower heat resistance (2) change in consistency, usually softening, or (3) decrease in shear stability. Mixtures which show none of these changes are considered compatible."

-NLGI Lubricating Grease Guide. Fourth Edition

TECHNICAL APPENDIX

= Incompatible

Typically results in a softening or hardening of greater than 1 1/2 the NLGI grade, a shift in the dropping point, and a possible reaction of additives or base oils.

GUIDE FOR COMPRESSORS IN GAS SERVICE

Royal Purple's line of specialty synthetic lubricants offers performance advantages in the lubrication of compressors in gas compression service.

ROYAL PURPLE PRODUCT OVERVIEW

GENERAL LUBRICANTS

1. Synfilm NGL with Synerlec additive technology is formulated to prevent hydrocarbon dilution.

- 2. Synfilm GT with Synerlec additive technology, is a synthetic, high temperature compressor oil.
- **3.** Acivac is an excellent lubricant/corrosion preventive in acidic environments.

NSF CERTIFIED LUBRICANTS

1. Crystal-Clear is NSF Certified for H1 service.

PRODUCT APPLICATION GUIDE

I. CHEMICALLY REACTIVE—OXIDIZING GASES

/ II. CHEMICALLY REACTIVE—NON-OXIDIZING GASES

Nitrogen	1st choice	Synfilm NGL	1st	Synfilm NGL	
Hydrogen	2nd	Synfilm GT	2nd	Synfilm GT	
Helium Carbon Monoxide Carbon Dioxide Natural Gas	3rd	Crystal-Clear			

Hydrocarbon gases such as:

Methane Ethane Propane Butane Pentane	1st 2nd 3rd	Synfilm NGL Synfilm GT Crystal-Clear
Methylene Ethylene Propylene Butylene Acetylene	1st	Crystal-Clear

Note: Check lubrication recommendations in equipment manual for correct ISO viscosity grade. If any catalyst is used downstream of the compressor, check with Royal Purple's Industrial Tech. Department prior to product selection.

Royal Purple's lubricants are saving individual companies millions of dollars a year in gas compressor service!
